## Houseplant Care Guide

Pot in a well-draining potting mix.

Place in bright, indirect light. Darker green varieties can tolerate medium light areas.

Always check the moisture of your soil before watering. Water when the top half of the soil has dried. Be careful not to overwater as they are susceptible to root rot. Water less frequently in winter.

Diluted balanced fertilizer once a month in spring and summer.

Keep humidity levels high (60-70%) for best results and keep the temperature above 60 degrees.
