

AMYDRIMUM

Houseplant Care Guide

Pot in a soil mixture made for cactus and succulents.

Place in bright, indirect light. They can tolerate some direct morning light, but leaves will burn in direct afternoon light. Rotate plant to ensure even growth.

Always check the moisture of your soil before watering. Water when the top two inches of the soil have dried.

Diluted balanced fertilizer once a month in spring and summer.

Keep your plant in temperatures about 60 degrees and in high humidity (60-70%).
