

# CISSUS DISCOLOR

## Houseplant Care Guide

Pot in a well-draining potting soil

Place in bright, indirect light. Avoid direct light on the plant as it will burn the leaves.

Always check the moisture of your soil before watering. Water when the top two inches of the soil have dried out.

Diluted balanced fertilizer once a month in spring and summer.

Cissus Discolor enjoy temperatures between 60 and 80 degrees. Do not let them stay in temperatures lower than 50 degrees. They thrive in high humidity (60-70%).
