

CYCLAMEN

Houseplant Care Guide

Use a high quality potting mix like Black Gold All Purpose Potting Mix.

Place in bright indirect light.

Water when the top two inches feels dry.

Use a low-nitrogen fertilizer every other week when it is fully flushed out. Do not fertilize while dormant.

Cyclamen enjoy high humidity (60-70%). They do not like extreme heat, so keep them at temperatures between 60-70 degrees during the day.

Cyclamen will go dormant in the spring and summer. Their leaves will yellow and fall off. During their dormant stage, reduce watering, do not fertilize, and keep them in a cool, shady location.
