

FERN

Houseplant Care Guide

Pot in a high-quality potting mix like Black Gold's All Purpose Potting Mix.

Place in bright, indirect light. Ferns can tolerate medium to low light as well. Too little light will slow growth, but too much light can burn the foliage.

Always check the moisture of your soil before watering. Water when the top 2" of the soil have dried. Do not let your ferns dry out completely.

Diluted balanced fertilizer at half strength once a month in spring and summer.

Use a pebble tray or humidifier to keep the humidity around your fern at 60 to 70%.
