

FICUS

Houseplant Care Guide

Pot in a high-quality, well-draining potting mix.

Place in bright, indirect light. A south facing window is best. Ficus do not do well in low light conditions.

Always check the moisture of your soil before watering. Water when the top half of the soil has dried. Water thoroughly (water is draining out of the bottom hole). Do not let them sit in water for longer than 10 minutes.

Diluted balanced fertilizer at half strength once a month in spring and summer.

Ficus will do well in average household humidity but prefer extra humidity from a pebble tray or humidifier. Keep them away from drafty areas.
