

HYPOESTES

Houseplant Care Guide

Pot in a high-quality, well-draining potting mix, like Black Gold All Purpose Potting Mix.

Place in bright, indirect light. They can tolerate some morning light but will burn in the hot afternoon sun. If they do not receive enough light, they will become leggy.

Always check the moisture of your soil before watering. Water when the top two inches have dried out. If your plant has dried out too much, it will wilt. With a good drink of water, they will perk back up!

Diluted balanced fertilizer at half strength once a month in spring and summer.

Keep them in temperatures between 60-80 degrees. Add humidity with a humidifier or pebble tray.
