

# LIPSTICK PLANT

## Houseplant Care Guide

Pot in a high-quality, well-draining potting mix, like Black Gold All Purpose Potting Mix.

Will perform best in bright, indirect light, but can adapt to low light conditions. If placed in low light, you will notice slowed growth and a lack of flowering.

Always check the moisture of your soil before watering. Water when the top 25% of the soil is dry.

Diluted balanced fertilizer at half strength every other week in spring and once a month in summer.

Lipstick plants appreciate high humidity environments. Use a humidifier or pebble tray to raise the humidity.
