

# PEPEROMIA

## Houseplant Care Guide

Pot in a high-quality, well-draining soil.

Place in bright, indirect light. Can tolerate lower light conditions but their growth will slow.

Always check the moisture of your soil before watering. Water when the top half of the soil has dried. Be careful not to overwater as they are susceptible to root rot.

Diluted balanced fertilizer once a month in spring and summer.

Peperomia prefer high humidity (60-70%). Use a pebble tray or humidifier to increase the humidity around your plant.
