

# SANSEVIERIA

## Houseplant Care Guide

Pot in a well-draining soil mixture.

Place in indirect bright light for faster growth and low light for slower growth.

Always check the moisture of your soil before watering. Water when 75% of the soil has dried out. It is better to err on the dry side, so be sure to let the soil dry out between watering.

Diluted balanced fertilizer once every six months.

Sansevieria will do well in average household humidity.
