

SCINDAPSUS

Houseplant Care Guide

Pot in a high-quality, well-draining soil.

Place in bright indirect light. Scindapsus are tolerant of some direct morning light, but will burn in prolonged direct sunlight.

Always check the moisture of your soil before watering. Water when the top 50-75% of the soil has dried out.

Diluted balanced fertilizer once a month in spring and summer.

Scindapsus do well in average household humidity. If your air is on the drier side, it would appreciate a pebble tray or humidifier.
