

SPIDER PLANT

Houseplant Care Guide

Pot in a well-draining potting soil.

For bold color, place your Spider Plant bright indirect light. They are also tolerant of low light conditions.

Always check the moisture of your soil before watering. Water when the top half of the soil has dried.

Diluted balanced fertilizer once a month in spring and summer.

Spider Plants prefer a humid environment (50-60% humidity). Brown tips could indicate the humidity is too low.
